

## Gamebreaker and Gamebreaker Plus Version 7 Release - 29.08.07

Sportstec is excited to announce the release of Gamebreaker and Gamebreaker Plus Version 7. With 12 new features in Gamebreaker Plus and 4 in Gamebreaker, Version 7 offers even more advanced analysis capabilities.

What is new in Version 7?

The first feature, Quickstart Capture, has never before been available in any of the Sportscode products. Capture can be initiated with one keystroke or mouse click. The file name is simply stamped with the date and saved in the last target location for capture. This feature is designed for use with our Elite software. Elite has new remote communication abilities, it can remotely start/pause/end capture and code any Gamebreaker software over a network.

We reinvented the splice movie feature, you can now “stack” as many instances together in synchronization as your computer can handle playing. This means you can take as many angles of the performance and compare them side by side, top to bottom - really any arrangement is possible. Not only can you stack instance movies, but you can stack timeline movies too. Multiple timelines can be merged to create incredible frame by frame performance analysis and presentation. Even after the timeline movie is “stacked”, you can select which movie to play in full screen. Stack instance movies are in all versions.

Combine timelines, once an Elite and Pro feature, is now available in Gamebreaker Plus. With Combine timelines, you can quickly fuse multiple timelines in one timeline while keep all coding in tact. It creates a reference file to the original movies, thus taking up very little hard drive space.

Gamebreaker Plus now comes with full coding capabilities. You can now code performances while the video is presented in full screen with the code window being displayed transparently over the video. On top of this, Gamebreaker Plus and Pro users now have the ability to link exclusive code button to code button. Exclusively link two buttons; if one of those buttons is coding and the other is pressed, it will stop coding the active button and start coding the last one pressed. Coding the event has never been easier or faster.

Instance Edit Window was previously developed for Elite and is now accessible in Gamebreaker Plus and Pro. The instance edit window is used to quickly trim any selected instance in the timeline with frame accuracy.

After stacking, combining and coding your timelines, you can make the timeline a rapid presentation tool with the Sequential and Selection order tool in Gamebreaker Plus. You can select sequential rows of instances to make a

movie or select specific instances in any order to make the movie. With these new instance selection options comes the New Row Plus feature. New to Sportscode Gamebreaker Plus, Pro and Elite, New Row Plus will create a new row from all the selected instances, dropping all the coded information into the new row.

Version 7 means editing of movies has never been easier, with the ability to simply drag and drop. Select a segment of the movie you wish to join with another and either drag and drop it into place or copy and paste it. Segments can be placed at the beginning, end, or anywhere in the movie that you want.

Gamebreaker and Gamebreaker Plus users can now customize their drawing toolbar. Click on the expander button in the toolbar and select only the tools you wish to display. This is great for making the toolbar a little less obtrusive while using it in presentations. Another new presentation aid is the new remote control options. The Apple Remote or Commando Remote can be used to perform movie playback, drawing tool activation, and code hotkeys with the code window. Each button can be individually customized in the new preferences window.

Version 7 adds flexibility and power to Gamebreaker and Gamebreaker Plus. It allows users to move their analysis to the next level. We believe that these new features will inspire you and help you to achieve that competitive edge.

Gamebreaker and Gamebreaker Plus are now available for download from the support website. Sportscode Pro and Elite are coming in the next month. Please note that these versions require a new V7 registration code. Contact your reseller or Sportstec to get your new codes. These are chargeable upgrades in most circumstances.
